

Control system for surface heating and cooling

HEATING

THERMOSTATS

- Controls up to 8 zones each 1-4 actuators in 24 V or 230 V version
- Convenient system configuration by touch and in full text via strawaLiviX room controller
- The start-up assistant helps with quick and correct initial setup
- Selectable additional functions for free outputs: speed-controlled heating pump, weather-compensated mixing circuit, post-heating, alarm function, heating/cooling switchover, air dehumidifier and much more. (depending on version)
- StrawaLiviX room controllers, strawaLiviX room thermostats or room sensors can be connected per zone
- Simple system maintenance through software updates via WiFi and smartphone app for the end user
- Preventive dew point monitoring based on the relative humidity in the room
- Modular, expandable system for networking several strawaLiviX boxes. For example, outside temperature and heating or cooling requirements are exchanged in order to always provide exactly the right flow temperature

strawaLiviX Box

The strawaLiviX Box is a universal heating and individual room controller for panel heating. In conjunction with strawaLiviX room controllers, strawaLiviX room thermostats and room sensors, it enables efficient use and functional control of your surface heating with intuitive operation.

The inputs and outputs can be freely assigned via strawaLiviX heating / strawaLiviX climate, so that a wide variety of heating systems can be implemented.

Control of 8 heating zones with 1-4 actuators each

optional weather-compensated control of heating circuit pump and mixer

Control of pumps, actuators, valves and energy sources via 0-10 V / PWM.

VERSIONS

strawaLiviX Box heating

For surface heating in combination with up to 8 strawaLiviX room controllers.

strawaLiviX Box heating climate

For surface heating and cooling in combination with up to 8 strawaLiviX room controllers climate.

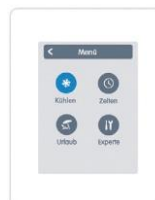

strawaLiviX - ROOMCONTROLLER

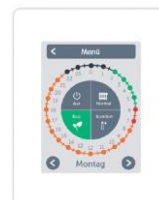

The strawaLiviX Box is configured via the elegant room controller with a capacitive TFT touch panel.

normal heating mode

Seasonal switch heating / cooling (Clima)

Intuitive timer

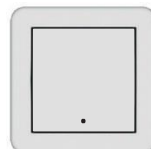

Menu for configuring the strawaLiviX Box

ACCESORIES

strawaLiviX Roomthermostat

Digital room thermostat with integrated temperature sensor and WiFi module for panel heating systems in connection with the strawaLiviX Box.

strawaLiviX Roomsensor

Digital room temperature and humidity sensor with communication via WiFi in connection with the strawaLiviX Box.

EASY INSTALLATION
